

MODEL EVALUATION:

Real world dataset Stimulation results:-

REPORT:-

NIDS Iron Dome - Security Audit Report

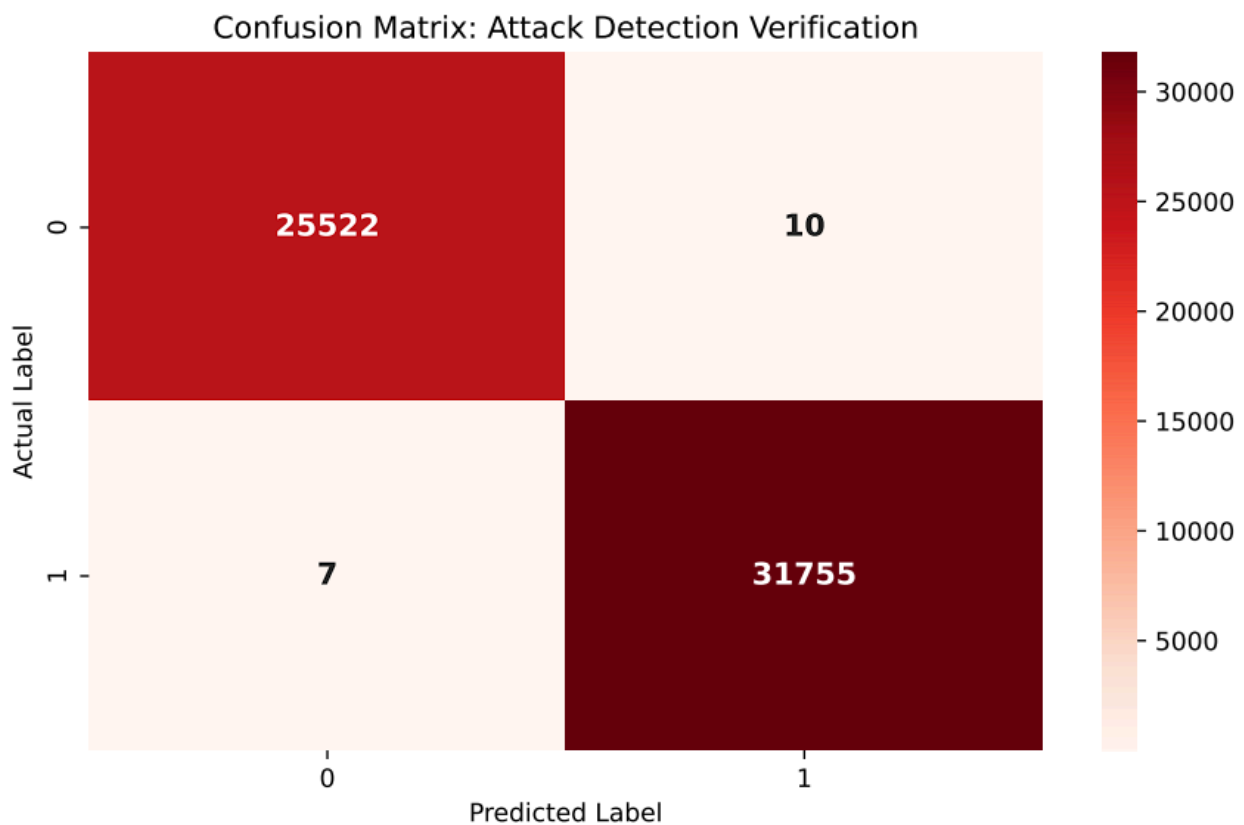

Generated on: 2026-01-05 17:06:12
Operator: Root
Data Source: Real Dataset (CIC-IDS2017 CSV)

--- MODEL PERFORMANCE ---

Total Records Analyzed: 5000+
Model Accuracy: 99.97%
Total Threats Intercepted: 31765
Algorithm: Random Forest Classifier
Trees: 100 | Split: 80%

--- STATUS ---

System Status: ONLINE
Threat Level: MODERATE

GUIDE TO VISUAL DIAGNOSTICS (How to read this graph):

The Confusion Matrix compares the AI's predictions vs Reality.

1. Top-Left (0,0) - TRUE NEGATIVES:
Safe traffic correctly identified as Safe.
2. Bottom-Right (1,1) - TRUE POSITIVES:
Attacks correctly identified and blocked.
3. Top-Right (0,1) - FALSE ALARMS:
Safe traffic mistakenly flagged as an attack.
4. Bottom-Left (1,0) - MISSED ATTACKS:
Attacks that slipped past the system (False Negatives).

Note: High numbers in the diagonal (Top-Left to Bottom-Right) indicate a healthy, accurate model.
